

The manufacturing intelligence platform for medical device CDMOs.

Medical device CDMOs spend three weeks preparing for an audit. MESvantage cuts that to four days. Built and FDA-validated inside a live 250,000-knee-per-year orthopaedic CDMO — not a pilot, not a demo, but a product that has been running under FDA scrutiny for two years.

PLATFORM MODULES — 6 DOMAINS, 50+ FEATURES

DOMAIN 01**Quality**

FAI, FPY, SPC, DHR, NCR, CAPA, Incoming Inspection, Customer Quality Portal. Every record electronically signed and audit-ready.

DOMAIN 02**Production**

Real-time OEE, scheduling, and in-process documentation. Paper travellers eliminated. Shift handover in one screen.

DOMAIN 03**Metrology**

Automatic CMM parsing from Renishaw, Hexagon, and Zeiss. Tolerance failures flagged before the part leaves the machine.

DOMAIN 04**Training**

Operators can only run what they are trained on. Competency expiry, trainer sign-off, and enforcement automated.

DOMAIN 05**Intelligence**

CEO dashboard: machine utilisation, quality trends, energy spend, predictive alerts. No BI team or data analyst required.

DOMAIN 06**Platform**

Mobile PWA, digital signage, audit trail, e-signatures, role-based access. The regulated infrastructure layer.

WHY MESVANTAGE

Purpose-built for CDMOs

Not a generic MES retrofitted to medical. Every workflow — DHR, FAI, CMM, OEE, NCR — was designed for regulated contract manufacturing.

Validation transferable

IQ/OQ/PQ baseline already passed in a live regulated environment. Validation evidence transfers. Skip the 12-month validation programme.

Production-grade from day one

Stress-tested at scale, 24/7, under FDA scrutiny. Every feature has run on a real production floor — not a lab, not a sandbox.

COMPLIANCE CREDENTIALS

FDA 21 CFR Part 11

Full audit trail on every record change. Electronic signatures with intent capture. Access control and session management built in.

ISO 13485

DHR, traceability, incoming inspection, CAPA, and document control aligned to ISO 13485 quality management requirements.

Siloed SaaS

Each customer has their own compute, database, and storage. No data co-mingles across customers — a compliance feature, not a limitation.

IMPLEMENTATION TIMELINE — 90 DAYS TO LIVE

Weeks 1–4	Environment provisioned. Data migration from ERP (M1, SAP, Plex, Infor). Quality module configured. Staff onboarding begins.
Weeks 5–10	Production, OEE, and training modules live. CMM integration connected to existing metrology hardware. Parallel run vs. legacy system.
Weeks 11–13	Intelligence and reporting live. Legacy system retired. IQ/OQ/PQ documentation package delivered. Go-live sign-off.

FOUNDING CUSTOMER

"We built the MES we couldn't find on the market. It's been running live in our plant for two years — 250,000 knee systems a year, fully under FDA scrutiny. That's not a pilot. That's the product."

Patrick Byrnes, CEO — Croom Medical · ISO 13485 · FDA 21 CFR Part 11 · 250,000 knee systems/year
